PROFILE

I am an entrepreneur from Denver, Colorado, now based in the Netherlands. I build AI systems and automations for businesses, and I ship them rather than pitch them. A voice agent for a retailer that handles roughly 80 percent of its inbound calls. A live AI hiring-screen agent. A self-hosted agent pipeline that replaced manual prospecting. I came to this from the commercial side, running a studio and a client book, so I start from what the business actually needs before I start from what the model can do. Claude Code is my daily driver and I self-host open-weight models when the unit economics call for it.

SYSTEMS SHIPPED FOR CLIENTS

- **Voice receptionist, retail.** Twilio, ElevenLabs and RAG retrieval over a 2,600-product catalogue. Handles roughly 80 percent of inbound calls. Scoped by first splitting calls into what retrieval answers better than a person and what should never leave a human, then building only for the first.
- **Maya, AI hiring-screen agent.** Live at hire.allarounduniversal.com. Runs first-round screening conversations and hands structured output to the hiring manager. Built to remove one specific manual step, not to add an AI feature.
- **B2B prospecting pipeline.** Self-hosted LangGraph agent pipeline over KvK and SBI company filtering with Hunter.io and Apify enrichment. Replaced manual list building for the Dutch market.
- **Emé Official.** Live multi-currency storefront for a paying client, with quiz-driven personalisation and lifecycle email. emeofficial.com.

AUTOMATION & INTERNAL PLATFORMS

- **The Unified Harness.** A collect, store, learn and act loop running my own firm's pipeline, with an operator dashboard on Next.js and Coolify. Built on myself first, which is where the reusable patterns come from before a client sees them.
- **Content Engine.** Productised content pipeline for property agents in Dubai and the Netherlands. Live listing data in, finished video out. Deliberately an algorithmic assembly line rather than an agent per video, because cost per finished unit decided whether the product could exist. The clearest example of choosing not to use AI where it was the obvious answer.
- **Cost and model selection.** Evaluated DeepSeek, GLM and Kimi for agentic coding on licensing and cost, and routed a coding harness through an Anthropic-compatible endpoint to cut spend. Self-host via Ollama and vLLM when the economics push work off a frontier API.

STACK

Agents and orchestration LangGraph, Claude Code, RAG and pgvector, tool use, memory, evaluation, cost per unit of work.
Build Python and FastAPI, TypeScript and Next.js, Docker, Coolify and VPS, Supabase and PostgreSQL, Redis and BullMQ, Twilio, Stripe.
Local and open-weight Ollama and vLLM self-hosting, open-weight model evaluation, GPU and local inference infrastructure.
Also Generative media at production scale: ElevenLabs, Higgsfield, Kling, Veo, fal.ai, HeyGen. 700+ videos and 500+ campaigns for 80+ clients.

EXPERIENCE

Founder & Principal | 180 Meridian, AI systems and creative studio
Denver, Colorado and Woerden, Netherlands · January 2026 to present

- Take client problems from first conversation through to a running system: scope, build, deploy, hand over.
- Run the studio's own operations on the systems I build, so tooling is stress-tested internally before a client sees it.
- Scope and sell the work myself, working directly with owner and director-level stakeholders.

Creative Director & Client Lead | All Around Universal
Denver, Colorado · [START YEAR] to present

- Client-facing delivery and account ownership across 80+ businesses. Moved the practice from content into applied AI systems as client problems demanded it, which is where the systems work in this CV begins.

Earlier: account management and hospitality operations | Monarch Casino & Resort; The Broadmoor (internship)
Colorado, United States · [YEARS]

EDUCATION & LANGUAGES

B.A. Tourism & Hospitality Management | Turiba University, Riga, Latvia
Includes an international internship placement in Barcelona, Spain, 2017

Languages English (fluent), Russian, Uzbek. Dutch: beginner, actively learning.
